

Flag in Flames

📁 picoCTF > Forensics · + Tags

Hint was given to decode it to base64 and generate a image.

```
(kali㉿kali)-[~/ctf/Flag in Flame]
$ cat logs.txt | base64 -d >> image.jpeg

(kali㉿kali)-[~/ctf/Flag in Flame]
$ xdg-open image.jpeg
```

7069636F4354467B666F72656E736963735F616E616C797369735F69735F616D617A696E675F62653836303237397D

Convert this image to text using `tesseract` command

```
(kali㉿kali)-[~/ctf/Flag in Flame]
$ tesseract image.jpeg output
Estimating resolution as 208

(kali㉿kali)-[~/ctf/Flag in Flame]
$ ls
hello.jpg  image.jpeg  logs.txt  output.txt

(kali㉿kali)-[~/ctf/Flag in Flame]
$
```

If output file is opened then the text inside the image would be ready to copy paste.

```
(kali㉿kali)-[~/ctf/Flag in Flame]
$ cat output.txt
