I connect using ssh given by the question. Then, I used `ls` command to see the files.

```
ctf-player@pico-chall$ tree
-bash: tree: command not found
ctf-player@pico-chall$ ls
checksum.txt  decrypt.sh  files
ctf-player@pico-chall$
```

cat checksum.txt to see the hash

```
ctf-player@pico-chall$ cat checksum.txt
5848768e56185707f76c1d74f34f4e03fb0573ecc1ca7b11238007226654bcda
```

decryption command is given in the question. However, now I have to find the file that matches with this hash. Inside `files` directory, there are multiple files.

```
ctf-player@pico-chall$ ls files

```

`sha256sum` command can be used to see the hashes inside these files. However, this will give us a lot of hashes that is not necessary. So, `sha256sum` command with `grep` of that specific hash is needed to find that specific file

```
ctf-player@pico-chall$ sha256sum files/* | grep "5848768e56185707f76c1d74f34f4e03fb0573ecc1ca7b11238007226654bcda"
5848768e56185707f76c1d74f34f4e03fb0573ecc1ca7b11238007226654bcda files/8eee7195
```

that specific file is found. Now, just need to run the decryption command given in the question.

```
ctf-player@pico-chall$ ./decrypt.sh files/8eee7195  
picoCTF{trust_but_verify_8eee7195}
```

flag: picoCTF{trust_but_verify_8eee7195}
