```

7 // I made myself dizzy converting all of these numbers into different bases,
8 // so I just *know* that this vault will be impenetrable. This will make Dr.
9 // Evil like me better than all of the other minions--especially Minion
10 // #5620--I just know it!
11 //

18 // '::~:~::~:~:
19 // -Minion #7781
20 public boolean checkPassword(String password) {
21     byte[] passBytes = password.getBytes();
22     byte[] myBytes = {
23         106 , 85 , 53 , 116 , 95 , 52 , 95 , 98 , // j U 5 t _ 4 _ b
24         0x55, 0x6e, 0x43, 0x68, 0x5f, 0x30, 0x66, 0x5f, // U n C h _ 0 f _
25         0142, 0131, 0164, 063 , 0163, 0137, 061 , 063 , // b Y t 3 s _ 1 3
26         'd' , 'f' , '6' , '1' , '8' , 'a' , '2' , '3' , // picoCTF{jU5t_4_bUnCh_0f_bYt3s_13df618a23}
27     };
28     for (int i=0; i<32; i++) {
29         if (passBytes[i] != myBytes[i]) {
30             return false;
31         }
32     }
33     return true;
34 }
35 }
```

Using ASCII table to solve this flag. On the first column, convert decimal to ASCII symbols and on the second column, convert hexadecimal to ASCII symbols. After this, convert the third column octals to ASCII symbols and then, combine all the three converted columns and the last column to get the flag.

The flag: `picoCTF{jU5t_4_bUnCh_0f_bYt3s_13df618a23}`
